EDUCATION

KIET Group of Institutions

B.Tech | CGPA: 8.0 / 10.0

Ghaziabad, India

Nov 2022 - Jun 2026

TECHNICAL SKILLS

Languages: Java, C, TypeScript, JavaScript, SQL, NoSQL

Infrastructure: Docker, Nginx, Linux, Redis, RabbitMQ, Microservices

Frameworks: Node.js, Express.js, Next.js, React.js, Redux

Cloud & DevOps: Azure, Cosmos DB, CI/CD, GitHub, GitLab, Jira

AI / ML Tools: TensorFlow, PyTorch, OpenAI API, LangChain, Hugging Face Transformers

Developer Tools: VS Code, GoLand, IntelliJ IDEA Ultimate, Postman, Thunder Client

POSITIONS OF RESPONSIBILITY

Software Engineer

MetaUpSpace

Mumbai, India (Remote, Uttar Pradesh)

Feb 2025 - Present

- Spearheaded the transition from Trainee to full-time Software Engineer, collaborating cross-functionally with product, marketing, and design teams to take complete architectural ownership of delivering 12+ core feature modules for an AI-powered enterprise web platform built on the MERN stack and Next.js.
- Executed deep kernel-level performance tuning—optimizing process scheduling, I/O handling, and container resource allocations—which reduced server CPU utilization by 30% and improved application response efficiency under load.
- Directed backend API development and cross-team frontend integration, increasing sprint delivery velocity by 25% in a rapid Agile environment backed by continuous code review standards.

Trainee

MetaUpSpace

Mumbai, India (Remote, Uttar Pradesh)

Nov 2024 - Feb 2025

- Built, tested, and maintained 8+ scalable web application features across the MERN stack and Next.js, working alongside senior engineers and external stakeholders to align technical execution with business requirements.
- Resolved over 30 complex production bugs and optimized database retrieval pipelines, reducing query execution latency by 20% across core modules.
- Collaborated closely with QA and infrastructure teams to implement automated CI/CD deployment pipelines, ensuring high code quality and smooth version control management.

PROJECTS

- **Bus Tech** | Java, Node.js, Next.js, TypeScript, Docker, RabbitMQ, Redis, Microservices
Won **SIH 2024 (India's largest national hackathon)** outperforming hundreds of teams by collaborating directly with transit stakeholders, product designers, and operations teams to engineer an automated enterprise scheduling framework deployed for the Delhi Transport Corporation (DTC). Implemented intelligent driver/conductor allocation algorithms using object-oriented programming principles, reducing scheduling conflict rates by 35% and optimizing mandatory rest compliance across shifts.
- **Smart Load Balancer** | Node.js, TypeScript, Nginx, Docker, Redis, Microservices
Engineered a high-performance, fault-tolerant load balancing gateway supporting dynamic service discovery, request routing, and low-latency traffic distribution across 5+ independent microservices. Applied kernel-level TCP tuning and connection pooling configurations that maximized system throughput by 40% and virtually eliminated packet loss under intense high-concurrency stress testing.
- **Pharmansh** | Node.js, Next.js, TypeScript, Docker, Azure, Cosmos DB, Nginx
Architected full-stack web development performance optimizations that successfully sustained **10,000+ concurrent users** during peak event surges with zero downtime, cutting API response latency by 45%. Delivered a complete Warehouse Management System (WMS) managing end-to-end inbound-to-outbound medicine logistics in close coordination with supply chain and operations departments.
- **DecentraPay** | React.js, Vite, Solidity, Web3.js, Ethereum, JavaScript
Architected a decentralized payment gateway on Ethereum using custom Solidity smart contracts featuring owner-gated transfer logic and strict input validation layers. Integrated Web3.js with a responsive React + Vite frontend interface, allowing seamless wallet connection and direct on-chain ETH transfers without centralized third-party intermediaries.

- **Trello Clone** | *Next.js, TypeScript, Appwrite, OpenAI API, Zustand, Tailwind CSS, React Native*
Built a feature-rich collaborative project management platform featuring drag-and-drop kanban boards, real-time data sync via Appwrite BaaS, and robust foundations for cross-platform development. Partnered closely with UI/UX designers and product managers to integrate OpenAI APIs for automated AI-driven task summaries and workload analytics directly within the user interface.
